Biography

His work began in graffiti and over time migrated to visual arts. This dialogue between the studio and the city is recurrent in his production. With an artistic research based on the clash between geometry and the organic, his images are loaded with patterns, rhythm, dynamism achieved through stencils and visual paths, within a vibrant colorism that is presented in layers, juxtapositions and overlaps in fields that are delimited only by the meeting of colors, this from a formal point of view. Subjectively, it is possible to create parallels and dialogues with geometric patterns, tribal paintings with the decorative art of various cultures, peoples and eras.
